SKILLS

Front end
JavaScript, TypeScript, React, Next.js, HTML/CSS, Tailwind, Bootstrap

Mobile
Swift, SwiftUI, watchOS, HealthKit, WidgetKit, Live Activities

Backend & data
Node.js, Bun, Express, PostgreSQL, SQL, MongoDB, Supabase, Firebase, REST APIs

Platforms
Stripe, Meta & Google Ads APIs, Cloudflare Workers, GitHub Actions, CI/CD

Design & video
Final Cut Pro, CapCut, Canva, Figma; logos, app icons, ad creative

Also
Godot/GDScript, C#, Python, Twilio, Socket.IO, Agile/SCRUM, AI (OpenAI API, Claude)

EDUCATION

A.S., Computer Science
Rowan College of South Jersey · 2026

Web & Database Development Certificates
Miles Technologies Boot Camp · 2021

PROFILE

400+ sales tied to ads in 4 months · Kiosk at **all 7 locations** · **200+** Mile A Day users

Front-end-focused software developer, now working across the full stack, with 5+ years shipping production web and mobile software. At Foley Prep, a 7-location tutoring company, I'm on the dev team behind the software the business runs on: the Digital SAT practice platform, the shop and Stripe checkout, scheduling, a face-recognition check-in kiosk, and Ad Studio, which ties every ad to the sale it drove. I co-founded **Mile A Day**, live on the App Store, and design my own graphics and video.

EXPERIENCE

Software Developer
Mar 2023 – Present
Foley Prep · Haddonfield, NJ

- **Ad Studio** (led development): ties Meta and Google Ads clicks to the Stripe purchases they drove, using Meta Pixel + Conversions API and Google Ads conversion tracking; in its first 4 months it attributed **400+ sales and 120+ new clients** to specific ads.
- Added an AI content studio (OpenAI) that writes and generates social posts and schedules them to Instagram and Facebook.
- **Digital SAT platform:** helped build the practice-test app and built its adaptive score reports: topic performance, missed/omitted questions, timing, printable and emailed reports.
- **Front-desk kiosk** (led development), live at all **7 locations**: face-recognition check-in with live camera admin, punctuality reports and automatic late-arrival texts.
- Core developer on staff/client scheduling, PTO and calendar management (approvals, conflict detection), and the shop and Stripe checkout.
- Lead the marketing site and SEO pages; **2,400+ commits** to the Node/Express/MongoDB codebase since 2023.

Integrations Developer
Mar 2021 – Jun 2022
XGen AI · Clearwater, FL (Remote)

- Deployed custom JavaScript/HTML/CSS integrations of AI "Recommended for You" experiences into e-commerce storefronts, matched to each brand.
- Owned the rulesets and page triggers controlling when personalized content appeared, directly affecting client conversion.
- Built one-off carousels and recommendation widgets; debugged cross-browser issues across dozens of live client sites.

Programming Intern
Jul 2020 – Mar 2021
USLI · Wayne, PA (Remote)

- Selected for the competitive paid College Help internship; shipped C#, SQL and JavaScript changes to production with senior developers.
- Worked in SCRUM/Agile with daily standups, sprint planning and code reviews; debugged in Visual Studio.

PROJECTS

Mile A Day `Live · App Store` Co-founder & developer: daily mile streaks, competitions, live group walks and a social feed. **200+ users, 66,000+ miles** logged; my own streak is 500+ days. SwiftUI · watchOS · TypeScript · PostgreSQL · Next.js

Fetch `Playable on robwiscount.org` 3D local-multiplayer party game with CPU opponents, 8 arenas and power-ups. Godot · GDScript

Client sites: Trouble Brewing (React + click-to-edit CMS), Pressed by J&H (Stripe checkout), Traveling Tastebuds (food map + admin). React · Supabase · Stripe · MongoDB

LeBronify · Dawg House Duel · Unused CSS Detector: Parody music player (web + iOS), a game-show web app, and a published VS Code extension. SwiftUI · JS · Cloudflare Workers · TypeScript
